

Testing Search functionality:

- User should be able to search for a book given a name and have the program list all the books that match.
- User should be able to type hunger games into the search box and see all the hunger games books displayed.
- Acceptance criteria: the web page should display only books containing 'hunger games' in the title.
- The user tester should be someone who is into reading and does not have a lot of tech experience.

Testing ability to add reviews:

- User should be able to add a review to a book when on the bookpage.
- User should be able to type in a book title, like 'to kill a mockingbird', click on the book, and write a review.
- Acceptance criteria: the review should be stored in the review table in the database and wont let the user submit the review until all the mandatory fields are filled out.
- The user should be someone who is into reading and level of tech experience doesn't matter

Testing Deleting account:

- User should be able to navigate to their account page and be able to delete their account
- Acceptance criteria: When the user deletes their account they should be sent to the login page, their account information should no longer be stored in the user database, and if they try to login with their information, they aren't able to and are told the account doesn't exist.
- The user should be someone with little technical knowledge to assure easy usability

Testing registering account:

- User should be able to easily access the registration page and sign up given their information
- Acceptance Criteria: The user should not be able to submit until they filled out all the mandatory fields. The user information should then be stored in user database and the user should be redirected to the home page.
- The user should be someone with little technical knowledge

Testing Logging into account:

- User should be able to log into their account when entering correct information
- Acceptance criteria: If the user enters the correct information they will be logged into their account. If users enter the incorrect information, a message will be displayed that notifies the user that the information entered is incorrect.
- The user can be someone with little technical knowledge
